

Introduction to Homelessness Report Cards

Although traditionally used to evaluate student performance in the classroom setting, report cards were first used to evaluate organizational performance in the mid 1800s (Gormley & Weimer, 1999). The use of organizational report cards became popular in the 1970s to highlight trends and research on social issues. Report cards have been used in a variety of fields including education, health, law, and politics (Austen & Pauly, 2012).

The Merriam–Webster dictionary defines a report card as “an evaluation of performance” (Report Card, n.d). A recent article by Austen and Pauly (2012) reviewed the use of report cards in highlighting homelessness issues. They define a homelessness report card as “a publicly accessible synthesis of regional socioeconomic indicators that can be used to evaluate (or grade) the determinants of homelessness within a community” (p. 3). Many North American cities have used this approach to track progress in addressing homelessness and advocate for solutions, including Vancouver, Halifax, Fredericton, Ohio, and Los Angeles (Austen & Pauly, 2012).

Alliance to End Homelessness Ottawa

The Alliance to End Homelessness Ottawa (ATEH) became a non-profit organization in 2010 after functioning as an advocacy group for the prevention and reduction of homelessness since 1995. In 2012, ATEH had over 40 member organizations and a number of individual members. ATEH is governed by a Steering Committee (Board of Directors) to oversee all activities and has two standing working groups, the Public Affairs Working Group and the Research and Evaluation Working Group.

The ATEH Mandate

To improve the efficiency and effectiveness of its member organizations by:

1. Providing for the coordination of member organizations for the purpose of:
 - Generating ideas and solutions to help individuals and families who are homeless or “at risk” of homelessness;
 - Strengthening partnerships between member organizations to better address homelessness issues; and
 - Communicating consistent messages about homelessness to clients and the public.
2. Conducting research and evaluation, as well as publishing reports and recommendations to assist member organizations in developing creative solutions to homelessness.

3. Delivering professional development to member agencies to allow them to better address homelessness issues.
4. Carrying out non-partisan advocacy for increased services and supports for those who are homeless or “at risk” of homelessness (ATEH, n.d.).

Report Card on Ending Homelessness in Ottawa: History

The Report Card on Ending Homelessness in Ottawa was first created in 2004 by ATEH’s Research and Evaluation Working Group (REWG). The goals of the first report card were:

Short-term: To improve sharing of up to date information on the issues of homelessness in Ottawa, describe progress in addressing homelessness over time and identify emerging issues and solutions.

Intermediate: To increase public awareness around the issue of homelessness and mobilize community organizations and community members to engage and respond creatively to community needs towards ending homelessness. Also to increase awareness among government and funding decision-makers about solutions that will end homelessness as it relates to affordable housing, income support, and health and social services.

Long-term: To eliminate homelessness in Ottawa. By focusing attention on the topic of homelessness, this will facilitate improved and effective programs and policies for individuals who are homeless or vulnerably-housed thereby ending homelessness in Ottawa (Fuller, Browne, Beaulac, & Aubry, 2006).

The first Report Card on Ending Homelessness in Ottawa, published in 2004, was well received and a report card has been published annually since then. Based on a set of indicators, each report card presents data in the areas of homelessness, housing, and income, comparing the previous year’s numbers to the current year to show the changes that have occurred. The 2004 edition established a baseline for the indicators. Other content in the report card varies each year, including the presentation of local research findings, description of community programs, and recommended policy direction for addressing homelessness.

Purpose of this Evaluation

Since its inception, the Report Card on Ending Homelessness in Ottawa has evolved. Changes in grading, page topics, layout, and language have made it more accessible to a variety of audiences. However, these changes have not been tracked. The purpose of this Phase 1 evaluation is to review the report card since its inception and describe the evolution of this publication. It is hoped that this evaluation will provide useful

information to the ATEH for future report cards and inform the Phase 2 evaluation to be completed in 2013.

Methodology All eight report cards that have been published by the ATEH were reviewed and analyzed for content and modifications by year. Specific areas of focus included: grading, indicators, themes, and member organization presence. Also, relevant emails and documents from the REWG were reviewed to provide background information on the formation of each report card. Results are shown in the summary of findings and appended tables and graphs.

SUMMARY OF FINDINGS

Grading and Indicators

Indicators

Indicators are used to illustrate the yearly trends in homelessness and housing and progress rates towards the goal of ending homelessness. The indicators that the report card uses are: Homelessness, Income, Housing, and Length of Shelter Stay (see Appendix A). Indicators were established through a review of the literature and indicators used in other homelessness report cards (Beaulac, Goodine, Aubry, Cairns, Urquhart, 2004; Fuller et al., 2006).

Although the indicators have not changed since the first report card, several modifications to the wording and the breakdown of information have occurred to help clarify each indicator. For example, in 2004 the number of unique individuals who used shelters was given as a total. In 2005, this number was broken down into Single Men, Single Women, Youth and Families. Other changes include:

1. Addition of ODSP assistance amount (2005)
2. Addition of Rent Supplements (2005)
3. Breakdown of Individuals using emergency shelters into Single Men, Single Women, Youth, Families (2005)
4. Length of Shelter Stay becomes a separate indicator (2005)
5. Breakdown of "Family" into "Adults" and "Children" (2007)
6. Combining of the social housing waiting list and supportive housing waiting list due to changes in the Social Housing Registry (2009)
7. Average cost of a 1-bedroom apartment changed to the average cost of a bachelor apartment (2010)

Wording was also further clarified within the indicators. For example, "Income" was used to describe social assistance amounts, minimum wage, and the Consumer Price Index

increases from 2004 until 2009. This term was changed to "Affordability" in 2010. At the same time "Homelessness" was also changed to "Emergency Shelter Use" and "Housing" to "Affordable Housing". However, none of the indicators within the categories changed at that time.

Grading

Grading was first introduced in 2005 as a way to evaluate the progress made in addressing homelessness in Ottawa that occur over time. For a complete list of past report cards and grades, see Appendix B.

From 2005 to 2009 grades were assigned based on amount of change reflected in indicators from one year to the next. A set of anchors were developed that assigned grades according to amount of progress or deterioration reflected in change in indicators (see Table below). Three questions were posed to individuals to assist them in making their grading choices.

1. What are the chances of becoming homeless?
2. Once homeless, what are your chances of getting back to stable housing?
3. Is the support and service sector in Ottawa supporting those who are homeless or at risk improving, staying the same or getting worse?

REPORT CARD GRADES	Question response	Amount of change tracked
A = Significant Progress	a lot less	A = a lot less = 15% and more
B = Some Progress	somewhat less	B = somewhat less = 5 to 15%
C = No or Slight Progress	about the same	C = about the same = 5% or less,
D = Some Loss	somewhat worse	D = somewhat worse = 5 to 15%
E = Significant Loss	a lot worse	E = a lot worse = 15% and more

(L. Browne, Personal Communication, Feb 3, 2006)

Grading was not used in the 2004 report card because there was no comparison data available. In 2005, one overall grade was assigned to reflect overall progress towards all indicators. The two Working Groups and Steering Committee were asked to assign a grade based on the above questions. Grades were then finalized through discussions at both the Steering Committee and REWG. In 2006, the same grading levels were used but applied to each of the 4 indicators: Housing, Income, Homelessness, and Length of Shelter Stay. All members of the Steering Committee and two ATEH Working Groups were surveyed individually and asked to provide their grades for each of the four indicators "Based on your review, identify the letter grade that best represents your

impression of the improvement or decline in relation to "ending homelessness" that has occurred 2005 to 2006 "(L. Browne, Personal Communication, Jan 2007).

In addition, members were asked to provide a justification for these grades. The grades produced by the survey were then summarized and provided to the Steering Committee. Members of the Steering Committee assigned the final grades for the report card after a review of the survey results. Members voted on a grade for each indicator grouping to begin the discussion which proceeded until consensus was reached. This grading process continued in the same manner until 2010 when a new approach to grading was established.

In 2010, annual targets were created by the REWG at the request of the Steering Committee which they then presented to the Steering Committee consideration and revision of the targets. This modification resulted in a change in the grading process. Targets were established to show progress towards the goal of ending homelessness in Ottawa over a 10 year period by 2020.

Annual Targets

1. 1000 new units/rent supplements per year (+10 000 over 10 years)
2. A decrease of 500 person (-5000 over 10 years)
3. A decrease in shelter stay 3 days (-30 days over 10 years)
4. Have no more than 30% of income being required of people on low incomes for housing

Grades were then calculated based on how much progress has been made on the target. The table below shows the amount of progress required for each target to receive each grade.

The same process of asking Steering Committee and Working Group members to assign grades was used. Individuals compared the amount of progress on each

ATEH Annual Targets Table for Grading: Letter Grade, Definitions & Change				
Letter Grade	Affordable housing: new units plus rent supplements	Decrease in # of homeless people	Decrease in length of shelter stay	Affordability: % of income required for housing
A	700 – 1,000	- 500	- 3 days	30%
B	350 – 699	- 250	- 1.5 days	35%
C	200 – 349	0	0 days	40%
D	100 – 199	+ 250	+ 1.5 days	45%
F	0 – 99	+ 500	+ 3 days	50%

indicator to the related target and assigned a grade accordingly. All grades were then

summarized and finalized through Steering Committee discussions. This method of grading was also used in the 2011 report card.

Content

Referenced Organizations: Members/Agencies/Other

Member agencies have stayed mostly constant over the past 8 years in ATEH. Member organizations voluntarily join; their annual fees help to support ATEH operations, events, and publications. Many member organizations have been featured or mentioned within the eight report cards.

Early report cards often featured specific member organizations or programs from the member organizations for homeless individuals. More recently, report cards have featured affordable housing projects and programs that are affiliated with member organizations. However, 18 member organizations have not been mentioned in the report cards to date. Appendix C shows the member organizations and the number of times they have been mentioned or featured in all report cards.

Other types of organizations have also been featured within the report card. These include universities, hospitals, government organizations, funding agencies, and housing organizations. For a complete list of these organizations, please see Appendix C.

Page Topics (overarching themes)

Each page within the report cards was analyzed for its overarching theme and placed into 9 categories: Data/Research, Lived Experience, Politics, Physical Health, Mental Health, Housing, Call for Action, Income and Other. Topics reflect the overarching theme of the page only, not the more specific details of what is discussed. For a complete list of pages and topics, please see Appendix D.

Data/Research

The most frequent page topic was data/research taking up a total of 45 pages in the eight report cards. The number of data/research pages in each report card remained constant each year. This topic included any pages that discussed the results of a research study, data representing homelessness trends, and summaries of collected data.

Housing

Housing is also a frequent topic throughout the report cards appearing on a total of 41 pages. Housing included any discussions of affordable housing, housing programs, and housing trends.

Lived Experience, Politics and Other

Lived experience, politics, and other were all equally present on 20 pages each in the eight report cards. Lived experience was any article involving the opinions, quotes, or information directly from clients of programs and those with lived experience of homelessness.

Politics were discussed more frequently in the 2008-2011 report cards, with several pages dedicated to Federal, Provincial, and Municipal activities towards improving affordable housing and reducing homelessness. Earlier report cards did not have dedicated pages to politics and often combined politics with appeals to the public.

Other pages included program descriptions, table of contents, definitions of homelessness, and editorials from experts.

Health

Health was a topic that was seen often in some report cards and not at all in others. The 2006 report card focused on health, with the majority of pages discussing health and its relation to housing and homelessness. Other report cards had an average of 1 page dedicated to health. Physical health has been the focus of the majority of pages on health, with 16 pages dedicated to physical health and only 4 pages dedicated to mental health.

Income

Pages dedicated to income discuss issues surrounding minimum wage and social assistance, often in relation to the costs of housing. Earlier report cards discussed income more often than more recent report cards. Earlier report cards (2004-2007) have an average of 2 pages on income, compared to later report cards (2008-2011) that have an average of 1 page dedicated to income.

Call for Action

The last page of every report card has been dedicated to appeals to the public. These pages ask for action from readers through letters, campaigns, and other political activities.

Conclusion

Report cards have been established as a valuable tool for advocacy, increased public awareness, and dissemination of data on homelessness and affordable housing. The above findings illustrate the evolution of the ATEH "Report Card on Ending Homelessness in Ottawa" over its eight-year history. This information will be used to inform the Phase 2 evaluation, focusing on the impact and reach of the report card.
